Project Name	Metro Ticket Generating System
Maximum Marks	2 Marks

Customer Problem Statement Template:

Traditional metro ticketing systems rely heavily on manual ticket booking, physical ticket issuance, and manual verification processes, which lead to increased waiting times, operational inefficiencies, and inconvenience for passengers. There is a need for a centralized digital solution that enables automated metro ticket booking, unique ticket generation, QR code-based validation, and real-time ticket management.

The proposed Metro Ticket Generating System using ServiceNow aims to provide a seamless, secure, and efficient digital ticketing experience for both passengers and metro administrators through automation and workflow-based processes.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A metro ticket administrator or	Manage ticket generation and validation efficiently	The current process requires manual verification and ticket management	There is no centralized digital ticketing and QR validation system	Inefficient and overloaded

PS-2	A metro passenger	Book a metro ticket quickly and travel conveniently	The traditional ticket booking process takes more time and requires physical tickets	There is no centralized digital ticketing and QR validation system	Inefficient and overloaded
