

Project Design Phase
Proposed Solution Template

Date	28 June 2026
Team ID	24A55A0513
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	2 Marks

Proposed Solution Template:

S. No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Traditional metro ticketing systems involve long waiting times, manual fare calculation, physical ticket management, and inefficient ticket validation processes, leading to reduced passenger convenience and operational inefficiency.
2.	Idea / Solution description	The Metro Ticket Generating System provides an online ticket booking platform through ServiceNow Service Portal, automatically calculates fares, generates unique ticket numbers and QR codes, validates tickets digitally, and stores all ticket information in a centralized database.
3.	Novelty / Uniqueness	The project integrates ServiceNow Service Portal, Flow Designer automation, Business Rules, QR code generation, and digital ticket validation into a single metro transportation management solution.
4.	Social Impact / Customer Satisfaction	The system reduces waiting time, promotes contactless travel, improves passenger convenience, enhances security, and supports digital transformation initiatives in public transportation.
5.	Business Model (Revenue Model)	Revenue can be generated through metro ticket sales, premium subscription services, digital advertisements, service charges, and smart transportation partnerships.
6.	Scalability of the Solution	The cloud-based ServiceNow architecture allows the system to support additional metro stations, increased passenger traffic, advanced analytics, mobile applications, and future smart city integrations.
